Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-4 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 6,441,874. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present claims are broader in scope than the patented claims.

Claim Rejections - 35 USC § 103

Application/Control Number: 10/773,254

Art Unit: 2871

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Imoto (US 5742366) in view of Takao (US 5546203).

Imoto discloses a liquid crystal display device comprising: a liquid crystal display panel; a luminaire disposed so as to irradiate the liquid crystal display panel with light, having at least one fluorescent lamp 13; and an upper frame and a lower frame sandwiching at least the liquid crystal display panel and at least the luminaire there between.

The limitation not disclosed by Imoto is the frame having at least one opening/pore.

Takao discloses a frame fixing a liquid crystal display board to an illuminating device, wherein the frame has a cutout corresponding to a light source for advantages such as releasing heat. Therefore, it would have been at least obvious to one of ordinary skill in the art to employ a housing and/or the lamp holder having an opening for advantages such as releasing heat.

The use of a double-piped cold fluorescent lamp yields several advantages such as suppressing heat generated, high luminance. Therefore, it would have been at least obvious to one of ordinary skill in the art at the time the invention was made to employ a double-piped cold fluorescent lamp yields several advantages such as suppressing heat generated, high luminance.

Imoto discloses the heat conduction means 11 and the lamp holder constituted by the same member, wherein the material comprises acrylic resin. Thus, the thermal conductivity of

Art Unit: 2871

the acrylic resin (the lamp holder) is at least lower than the thermal conductivity of silicone rubber.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Contact Information
